

Research Studies & Educational Grants

Corza Ophthalmology, a division of Corza Medical, is committed to advancing vision care through providing high-quality products, driving innovation, and supporting independent research.

The study of ophthalmic diseases and disorders, as well as the appropriate treatments and pathways to healing will ensure a continued improvement in the quality of life for affected individuals worldwide. Corza is dedicated to supporting such independent research with grant funding as a part of our Medical Education Program.

In accordance with all ethical standards and in compliance with current regulations and guidelines, Corza accepts requests for grant funding from individuals (including trainees, researchers, and faculty) and organizations presenting a cogent ophthalmology-relevant thesis, and who wish to develop evidence outlining their findings. Funding will be established at two levels and will be reflective of scope and anticipated output: small research grants (\$3,000-\$5,000); or large research grants (\$10,000-\$15,000). Application acceptance and funding approval is not in any way related to a current or future commercial relationship with Corza. Additionally, there is no requirement that the poster, paper, publication, or other collateral generated be favorable to our products.

If you or your organization is interested in applying for an educational grant from Corza, please contact grants@corza.com for more information.
